- This practical course will empower exercise professionals to guide individuals with cancer to a healthy and enjoyable lifestyle which will maximise their chance of living better and longer. The course material is based only on reliable, established and published research from around the world, it was written with the help of patients from a wide range of cultural backgrounds by an experienced cancer team which specialises in lifestyle and exercise research by the course author Professor Robert Thomas.
- Individuals who exercise regularly throughout their lives have been shown in numerous population studies to have a reduced risk of developing cancer. In terms of prevention, it has been shown that being sedentary and overweight could account for 14% of male and 20% of female cancer deaths in the UK.
- The benefits of exercise do not stop after diagnosis of cancer. A number of studies have proven that patients who exercise regularly after cancer have a better quality of life, have lower risks of side effects, have a lower risk of their cancer returning and generally survive longer. In terms of cure rate, the two most convincing studies involved men and women with bowel cancer.

Level 4 Cancer Rehabilitation qualification

The author of the course is one of Europe's leading oncologists, Professor Robert

Thomas who also sits on the Macmillan Cancer Survivorship Group.

This is a 5 day course delivered at venues across the UK and Internationally by experienced University lecturers and boasting the most comprehensive syllabus.

The course is divided between theoretical knowledge and practical skill development to equip the exercise professional with all the key information and experience to be confident in working with clients recovering from cancer diagnosis and treatment.

The course is endorsed by Skills Active and the Register of Exercise Professionals, contributing to 20 REPs CPD points.

Learning outcomes and objectives

The course boasts the most comprehensive syllabus for those seeking to advance their knowledge of exercise, cancer and rehabilitation, including

- Understanding Cancer and its treatments
- Lifestyle factors that increase the risk of cancer
